I am a Senior Full-Stack Software Engineer & Product Manager focused on architecting scalable web platforms and AI-powered mobile ecosystems. Experienced in bridging product vision with robust, end-to-end technical execution. Over the years, I've built responsive web applications using React, Next.js, and Astro, alongside cross-platform mobile apps using Flutter. On the backend, I specialize in designing robust infrastructure using Python, Django, PostgreSQL, and containerized Docker environments to deliver clean, scalable solutions.

WORK EXPERIENCE

Senior Full Stack Software Engineer
Boxin
AI-powered industrial quick-commerce platform
08/2026 - Present | Delhi, India

- Architecting and developing the customer-facing mobile application using Flutter and building the core backend infrastructure with Django and PostgreSQL/PostGIS.
- Implementing scalable caching and containerization workflows using Redis and Docker to streamline local full-stack development and deployment.
- Collaborating directly with the CEO to define platform architecture and translate business requirements into functional, AI-integrated quick-commerce features.
